ALEX MORGAN

ASPIRING DATA ANALYST
Learning & Progress Profile

Profile type	Personal learning portfolio (not a job-application resume)	Last updated	[Add date]
Current stage	[Choose: Beginner / Intermediate / Advanced]	Target review	[Add review date]

01 · PROFESSIONAL GOAL

Build durable, practical data-analysis capability from fundamentals to advanced methods: ask clear business questions, acquire and clean data, analyze it reproducibly, communicate findings with effective visualizations, and translate evidence into useful decisions.

Personal success measure: [Define measurable outcome, e.g., complete a portfolio project with a documented question, reproducible workflow, and clear recommendations.]

02 · CURRENT LEARNING STATUS

STATUS AREA	CURRENT ENTRY
Overall level	[Not yet assessed — update after self-review]
Primary focus	[Add current topic or course]
Study rhythm	[Add hours per week and preferred schedule]
Evidence of progress	[Add notebooks, exercises, dashboards, or notes]

03 · TECHNICAL SKILLS PROGRESS

Use one status per skill. Do not mark a skill Completed until you can demonstrate it independently with evidence.

SKILL	STATUS	EVIDENCE / NEXT ACTION
Excel	[Learning / Practicing / Completed]	[Add evidence or next action]
SQL	[Learning / Practicing / Completed]	[Add evidence or next action]
Python	[Learning / Practicing / Completed]	[Add evidence or next action]
pandas	[Learning / Practicing / Completed]	[Add evidence or next action]
NumPy	[Learning / Practicing / Completed]	[Add evidence or next action]
Matplotlib	[Learning / Practicing / Completed]	[Add evidence or next action]
Statistics	[Learning / Practicing / Completed]	[Add evidence or next action]
Data Cleaning	[Learning / Practicing / Completed]	[Add evidence or next action]
Business Analytics	[Learning / Practicing / Completed]	[Add evidence or next action]
Power BI	[Learning / Practicing / Completed]	[Add evidence or next action]
Git / GitHub	[Learning / Practicing / Completed]	[Add evidence or next action]
AI-assisted analysis	[Learning / Practicing / Completed]	[Add evidence or next action]
Automation	[Learning / Practicing / Completed]	[Add evidence or next action]
Advanced analytics	[Learning / Practicing / Completed]	[Add evidence or next action]

04 · LEARNING ROADMAP

Move forward based on demonstrated ability, not time spent. Update the stage and evidence fields as each topic progresses.

PHASE	FOCUS	EXIT EVIDENCE	STATUS
01 · Foundations	Excel; descriptive statistics; data types; tables; formulas; basic charts	Clean and summarize a small dataset; explain key findings	[Not started / Learning / Practicing / Completed]
02 · Querying & preparation	SQL; filtering; joins; aggregation; data cleaning; quality checks	Write reliable queries and document cleaning decisions	[Update status]
03 · Python analysis	Python; pandas; NumPy; notebooks; Matplotlib; exploratory analysis	Reproducible notebook with charts and concise interpretation	[Update status]
04 · Business reporting	Business analytics; KPI design; Power BI; dashboard storytelling	Dashboard tied to a defined audience and business question	[Update status]
05 · Reproducibility	Git/GitHub; version control; documentation; project structure	Repository with README, clear files, and repeatable steps	[Update status]
06 · AI & automation	AI-assisted analysis; prompt evaluation; workflow automation; validation	Automated workflow with checks, error handling, and human review	[Update status]
07 · Advanced analytics	Statistical inference; regression; forecasting; experiment analysis (as relevant)	Explain assumptions, limitations, and decision impact	[Update status]

05 · PROJECTS & PRACTICAL EXPERIENCE

No projects or professional experience are assumed. Add only work actually completed; practice work should be labeled as practice.

PROJECT / EXERCISE	STAGE	TOOLS	OUTCOME / LINK
[Project title]	[Planned / In progress / Completed]	[Tools used]	[Finding, artifact path, or repository URL]
[Practice exercise]	[Planned / In progress / Completed]	[Tools used]	[What was learned; evidence]
[Add another row as needed]	[Stage]	[Tools]	[Outcome / evidence]

06 · AI TOOLS & AUTOMATION LEARNING

- Learning: [Add tools or concepts being studied; e.g., prompt design, data privacy, validation, API basics].
- Practicing: [Describe a workflow being tested and how outputs are checked].
- Completed: [Record only a workflow independently tested; link evidence].
- Quality guardrails: verify calculations, inspect source data, protect sensitive information, and disclose AI assistance where relevant.

07 · ACHIEVEMENTS & MILESTONES

DATE	MILESTONE	EVIDENCE / REFLECTION
[YYYY-MM-DD]	[Specific skill or deliverable achieved]	[Link, screenshot, notebook, or lesson learned]
[YYYY-MM-DD]	[Next milestone]	[Evidence / reflection]

08 · NEXT LEARNING GOALS

- Next 30 days: [Choose one focused topic and define a measurable deliverable].
- Next 90 days: [Complete one end-to-end practice analysis and document it].
- Long term: [Define an advanced capability to build and the evidence that will demonstrate it].

Monthly review prompt: What can I now do independently? What evidence proves it? What is the next bottleneck?

Editable template note: replace every bracketed placeholder, update skill statuses, add rows as needed, and remove instructions that no longer apply. Keep a dated copy at each review.
